EDUCATION

PDPM IIIT Design And Manufacturing

Bachelor of Technology in Computer Science Engineering

Jabalpur, MP

2022 – Present

Resonance Junior College

Intermediate – Mathematics, Physics & Chemistry (MPC) | 96.9%

Hyderabad, TS

Jun 2020 – May 2022

Gowtham Model School

Secondary School Certificate (SSC) | GPA: 10.0 / 10.0

Hyderabad, TS

2020

SKILLS

Languages	C++, Java, Python, JavaScript (ES6+), TypeScript, SQL
Frontend	React.js, React Native, Next.js, Microfrontends, Tailwind CSS, HTML5, CSS3
Backend	Node.js, NestJS, Express.js, REST APIs, Microservices, RabbitMQ, Amazon SQS
Databases	PostgreSQL, MySQL, MongoDB (Mongoose), TypeORM
DevOps & Cloud	Git, GitHub, Docker, AWS (Lambda, S3, API Gateway, SQS), GCP, Firebase, Vercel
Concepts	OOP, DBMS, OS, Computer Networks, DSA, SDLC, System Design, LLD, Agile

EXPERIENCE

Campx

Jan 2026 – Present

Associate SDE Intern – Full Stack (NestJS, TypeScript, React, Tailwind CSS)

Hyderabad, TS

- Engineered an end-to-end **Event Management System** on a **multi-tenant SaaS** platform using **NestJS microservices**, **MySQL/TypeORM**, **MongoDB/Mongoose**, and **React microfrontends** – supporting concurrent event lifecycles with tenant-isolated data pipelines.
- Designed a **Platform Updates** broadcast module across decoupled **microservices** behind a centralized **API Gateway**; surfaced live announcements to **React microfrontends** using **React Query** (stale-while-revalidate) for low-latency, consistent UI state.
- Reduced outbound API calls by **35%** and improved **Time to Interactive (TTI)** through strategic **memoization**, component-level **lazy loading**, and **React Query** cache-layer optimizations across critical user journeys.
- Compressed a **2-week React Blueprint** UI migration into **2 days (7x velocity gain)** by orchestrating parallel refactor tasks via **Claude Code** multi-agent automation.
- Implemented **asynchronous event-driven messaging** with **RabbitMQ** (producer-consumer pipelines) and **Amazon SQS** for decoupled inter-service communication; enforced **DTO validation** (class-validator), **repository pattern**, and polyglot persistence across all production microservices.

Docsile

Feb 2025 – May 2025

Full Stack Developer (React, Node.js, AWS, Tailwind CSS)

Remote

- Engineered a responsive, component-driven web application using **React.js** and **Tailwind CSS**; applied **route-based code splitting** (**React.lazy/Suspense**) and asset-level **lazy loading**, cutting **First Contentful Paint (FCP)** by **25%** and improving overall perceived load performance.
- Architected an **event-driven serverless** data automation backend on **AWS Lambda** (Node.js runtime), eliminating dedicated server overhead and enabling **auto-scaling** compute – reducing infrastructure operational cost to near-zero on idle.
- Designed and deployed secure **RESTful APIs** via **Amazon API Gateway** with **request throttling** and stage-level access control, bridging the React frontend to backend **microservices** for high-availability, auditable data flow.

PROJECTS

Grid – Campus Marketplace | React Native, Supabase, PostgreSQL, Razorpay, Tailwind CSS | Link | Landing Page

- Launched on **Google Play Store** with **500+ active users** and a **4.9-star** rating – a peer-to-peer campus marketplace for buy, sell, exchange, and service-request listings.
- Built the **React Native** cross-platform app with **real-time bidirectional chat** (Supabase Realtime), **push notifications**, and image-based listings backed by **Supabase** (PostgreSQL, Auth, Storage).
- Integrated **Razorpay** for in-app payments with **HMAC webhook signature verification** and **PostgreSQL** double-entry ledger reconciliation to guarantee end-to-end payment integrity.
- Shipped a **React + Tailwind CSS Admin Panel** (listing moderation, user approvals, engagement analytics) and a separately **SEO-optimized landing page** to drive organic installs.

Personal Blog Platform | Next.js 16, TypeScript, Supabase, PostgreSQL, Razorpay, Tailwind CSS, Vercel | GitHub | Link

- Architected a full-stack blog engine on **Next.js 16 App Router** with **React Server Components (RSC)**, **Incremental Static Regeneration (ISR)** via a cookie-free **Supabase** public client, and dynamic **sitemap/RSS** generation for 100% Lighthouse SEO parity.

- Engineered server-side **PostgreSQL full-text search** using `tsvector` columns and `websearch_to_tsquery` (phrase, OR, negation support); enforced **Row-Level Security (RLS)** across all tables and logged every query to a `search_queries` audit table for reader-demand analytics.
- Integrated **Razorpay** payment and subscription lifecycle (7 webhook event types) with **HMAC-SHA256** signature verification, idempotent event deduplication via **UNIQUE** constraint on `idempotency_key`, and a **PostgreSQL** subscription state machine – eliminating duplicate-delivery race conditions.
- Shipped a **Tailwind CSS** admin panel (post moderation, **Sharp** EXIF-strip + **WebP/AVIF** media transcoding, feature flags, broadcast newsletters via **Resend**) with **HSTS**, **CSP**, **Upstash** rate limiting, and **Supabase Edge Functions** for scheduled publishing.

Atrack – Semester Tracker | *React 19, Firebase, Zustand, Recharts, Framer Motion, Tailwind CSS* Link

- Architected an **8-page serverless SPA** on **React 19** with **Firebase Firestore** real-time sync via `onSnapshot` listeners across 7 user sub-collections and a **dual-store Zustand** architecture – separating application data state from UI modal state – enabling live multi-device synchronization with zero manual refresh.
- Engineered a **weighted GPA computation engine** implementing **CPI** (cumulative) and **SPI** (per-semester) from a 9-grade point mapping; extended into a client-side **What-If scenario calculator** for hypothetical grade simulation – all memoized via `useMemo` to prevent redundant recalculation across 8+ derived dashboard summaries.
- Designed a **coin-based gamification system** with **Firestore atomic transactions** (`runTransaction`) guaranteeing race-condition-free reward increments across 25+ user actions; implemented **cascading batch deletes** (`writeBatch`) ensuring course removal atomically cleans 4 dependent sub-collections in a single commit.
- Delivered interactive **data visualizations** via **Recharts** (CPI/SPI trend line charts, expenditure pie charts with custom tooltips); shipped **multi-provider authentication** (**Google OAuth** + email/password) with 7-day session persistence and **route-based code splitting** (`React.lazy/Suspense`) for optimized bundle delivery.

SAKHIYA – Patented IoT Women’s Safety Device | *Embedded C++, ESP32, SIM800L, TinyGPS++, Telegram API*

- Developed **ESP32** firmware in **Embedded C++** integrating a **SIM800L GSM** module via dual **UART/AT-command** protocol, **TinyGPS++** parser (**NMEA 0183**), analog force sensor, and debounced push button – published under **Indian Patent No. 202521062326** (IoT wearable safety device).
- Implemented a **5-state emergency response state machine** (Idle → Triggered → Grace Period → Escalated/Cancelled) with a **10-second Telegram Bot cancellation window** (HTTPS polling via **UniversalTelegramBot**); on timeout, autonomously dispatches a **GSM voice call** (ATD command) and **SMS** carrying a live **Google Maps** coordinate link.
- Engineered **dual-redundancy activation** – analog force sensor (threshold >500) for tamper/compression detection and **INPUT_PULLUP** push button (300ms debounce) for manual SOS – each independently triggering the alert pipeline, with **GPS validity gating** (`isValid()`) and graceful SMS fallback on weak satellite fix.

LEADERSHIP & CERTIFICATIONS

- **Co-convener**, Central Mess Committee at IIITDMJ – managed operations and feedback for 1000+ students.
- **Volunteer**, Jagriti (tribal community service camps, Jabalpur) and **DeW 9.0** (workshop logistics for IIITDMJ’s flagship design event).
- **Certifications:** React Development, JavaScript, Computer Networks.
